Professional Experience

Data Science Engineer — Freelance

June 2025 – Present

- LLM evaluation and benchmarking: test task design, quantitative performance analysis, and output quality control for AI evaluation platforms.
- Full-stack development (React, Python) to build mock training environments designed to train LLM agents on real-world agentic tasks.

Data Science & Development Engineer — Sereneo, Paris, France

Nov. 2023 – June 2025

- Design and development of automation solutions (including chatbot, mailbot, callbot) integrating web, RPA, workflow, and AI
- Implementation of automation tools based on LLM models, corpus creation, and NLU model training
- In-depth analysis of large databases and complex Excel files to extract strategic information
- Creation of dynamic web reports and development of analysis reports with Jasper, Excel for decision-making
- Active participation in project management meetings, Task estimates, Project monitoring

Intern Assistant Project Manager (Developer) — Sereneo, Paris, France

May 2023 – Nov. 2023

- Development of automation solutions using RPAs, APIs, NLU models
- Implementation of an internal monitoring system for platforms with preventive alerts

Intern Developer — Xpertzon, Paris, France

Apr. 2022 – Aug. 2022

- Development of web applications using no-code, HTML, CSS, JS
- Integration of APIs (Billing, Mailing)
- Data analysis using Excel and Python
- Creation of dashboards for KPI tracking

Education

École Centrale d'Électronique, Engineering Degree — Connected Objects, Networks and Services

2018 – 2023

- **Core coursework:** Computer Networks (TCP/IP, IoT protocols), Embedded Systems, Signal Processing, Object-Oriented Programming, Cloud Architecture

Bangor University, Abroad Semester, Wales — Electronics, Web Technologies, and Computer Systems & Networks

Jan. 2021 - June 2021

Projects

ExcelGenius (excelgenius.fr) — AI-powered Excel productivity tool

- SaaS web application and Excel add-in leveraging LLMs to generate and insert formulas, create structured tables, analyze imported data (Excel/CSV) with charts and insights, and export results in Excel, CSV or PDF - all from natural language instructions. Reached 200+ users organically since launch.

Quantitative factor research — Crypto perpetuals

- Engineered cross-sectional predictive signals on crypto perpetuals (Hyperliquid/Binance universe) from funding rates, volume imbalance, and return momentum; evaluated signal quality via IC/ICIR and quintile stratification.
- Constructed systematic L/S portfolios by cross-sectional factor ranking with inverse-volatility weighting; backtested strategies in Python with full equity curve and drawdown analysis.
- Explored additional alpha sources: on-chain data analysis, oracle latency arbitrage on decentralized perpetuals (gTrade/Arbitrum), and time-based inefficiencies around options expirations.

Skills

Programming Languages: Python, SQL, JavaScript, HTML/CSS

Data & Quant: Pandas, NumPy, Matplotlib, Plotly, Chart.js, time series analysis

Languages: French (native), English (professional)
